|--|
| Study Programme: Physics |
| Course Unit Title: Modern methods for the characterization of nanostructures |
| Course Unit Code: FD18SMN |
| Name of Lecturer(s): dr Dramićanin D. Miroslav |
| Type and Level of Studies: PhD Physical Sciences |
| Course Status (compulsory/elective): elective |
| Semester (winter/summer): summer |
| Language of instruction: English |
| Mode of course unit delivery (face-to-face/distance learning): face-to-face |
| Number of ECTS Allocated: 15 |
| Prerequisites: |
| Course Aims: Training students to perform some of the basic experimental methods and procedures in the characterization of nanomaterials and nanostructures. |
| Learning Outcomes: The acquisition of knowledge and skills in analyzing and interpreting the results obtained in the characterization of nanostructured materials with different methods, and independent performanse of the selected experiment of the characterization of nanostructures. |
| Syllabus: <i>Theory</i> Introduction to the basic principles of materials characterization. General classification methods of characterization. Diffraction, microscopic and spectroscopic characterization methods of nanostructures. X-ray diffraction. Scanning electron microscopy (SEM). Transmission electron microscopy (TEM). Scanning probe microscopy (SPM). Scanning tunneling microscopy (STM). Introduction to luminescence. Classification of the most significant luminescent methods (photo-, hemi-, electro-, tribo-, radio-luminescence). The luminescent phenomena in nanomaterials. X-ray Fluorescence (XRF)-qualitative and quantitative determination of the materials composition. Vibrational spectroscopy (Infrared, Raman). Magnetic spectroscopy (Nuclear magnetic resonance-NMR, electron paramagnetic resonance-EPR). Methods for the characterization of thin films and analysis of the results. Specificities in the interpretation of the experimental results in the characterization of nanomaterials and nanostructures. <i>Practice</i> Research work and preparation and presentation of the seminar papers. |
| Required Reading: 1. G. Schmid, <i>Nanoparticles: From Theory to Application</i> , Wiley, 2004. 2. R.W. Kelsall, I.W. Hamley, M. Geoghegan, <i>Nanoscale Science and Technology</i> , John Wiley & Sons, 2005. 3. G. Cao, <i>Nanostructures and nanomaterials</i> , Imperial College Press, London, 2005. 4. C.P. Poole, Jr., F.R. Owens, <i>Introduction to Nanotechnology</i> , Wiley-Interscience, 2003. 5. Z. Guo, L. Tan, <i>Fundamentals and Applications of Nanomaterials</i> , Artech House, 2009. 6. W.G. Moffatt, G.W. Pearsall, J. Wulff, <i>Struktura i osobine materijala, knjiga I: Struktura</i> , TMF, Beograd, 1975. |

|------------------------------|-------------------|-------------------------|
| Weekly Contact Hours: | Lectures:4 | Practical work:6 |
|------------------------------|-------------------|-------------------------|

Teaching Methods:
 Theoretical teaching is carried out using modern presentation methods, with the active participation of the student, and practical teaching involves the preparation and presentation of the seminar work.

Knowledge Assessment (maximum of 100 points):

| Pre-exam obligations | points | Final exam | points |
|-----------------------------|--------|-------------------|--------|
| Active class participation | 5 | written exam | |
| Practical work | 10 | oral exam | 70 |
| Preliminary exam(s) | | | |
| Seminar(s) | 15 | | |

The methods of knowledge assessment may differ; the table presents only some of the options: written exam, oral exam, project presentation, seminars, etc.
